The following is a complete listing of all claims in the application, with an indication of the status of each:

Listing of claims:

- 1 1 (Original). A computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser,
3 comprising the steps of:
4 providing to the multi-modal browser a form having one or more fields
5 requiring user supplied information;
6 prompting by the multi-modal browser a user to fill in a form field by
7 verbal or tactile interaction, or a combination of verbal and tactile interaction;
8 and
9 moving to another form field requiring user provided input either after
10 a current form field has been filled in by the user or the user selects by verbal
11 or tactile interaction another form field.
- 1 2 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser recited in
3 claim 1, further comprising the step of exiting the form after the user has
4 supplied input for all required fields.
- 1 3 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 1, wherein the step of prompting is performed by reading aloud to the
4 user a heading of a form field to be filled in.

1 4 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 3, further comprising the step of audibly presenting to the user any
4 information that is contained in the form field.

1 5 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 3, further comprising the step of typing into the form field words
4 responsively spoken by the user.

1 6 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 1, wherein during the moving step the browser responds to one or
4 more verbal commands provided the user.

1 7 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 6, wherein the one or more verbal commands are selected from the
4 group including:
5 a command that directs the browser to skip from a current field to
6 another field;
7 a command that directs the browser to review the form to ensure that
8 all fields contain information;
9 a command that submits the form to an application program for
10 processing;
11 a command that cancels, or erases, information currently within a field;
12 and
13 a command that directs the browser to clear the form and reprocess it.

1 8 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 1, wherein during the moving step a default mode for moving is to
4 read the form fields in an order in which they are presented on the form.

1 9 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 1, further comprising the step of prompting the user for input by the
4 browser after a specified time period if the user has not responded to an earlier
5 prompt.

1 10 (Currently amended). The computer implemented method of visually and
2 audibly navigating fields within a form presented on a multi-modal browser as
3 recited in claim 1, wherein an audio queue controls the prompting, moving
4 and exiting steps.

1 11 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 10, wherein the audio queue contains objects that contain text to be
4 spoken.

1 12 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 10, wherein the audio queue contains objects that mark an entry to
4 and an exit from the form.

1 13 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 10, wherein the audio queue contains objects that mark an entry to
4 and an exit from a form element.

1 14 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 10, wherein the audio queue contains objects that request an
4 interruptible pause to the audio presentation.

1 15 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 10, wherein the audio queue contains objects that request a
4 repositioning of the audio queue.

1 16 (Original). The computer implemented method of visually and audibly
2 navigating fields within a form presented on a multi-modal browser as recited
3 in claim 15, wherein the repositioning includes the ability to loop back and
4 repeat part of the audio queue.
